

PRINCIPAL DEPOT
AT THE
PUBLICATION OFFICE
105 Nassau St.
New York

GEOLOGY:
The lower and rolling lands are alluvial and tertiary. The hilly region is cretaceous. Primitive rocks appear in many places. The great Plains consist of stratified clay & calcareous sands. On the base of these strata are deposits of Pleistocene sandstone, sandstone & shales. Coal beds of carboniferous age occur in the North West. Iron ores in considerable quantities are found in the Texas and Oklahoma. Silver, lead, copper, and zinc are also found in the North West. Salt at Salt Springs and by natural evaporation in the South West.

**ENUMERATION OF THE PRINCIPAL MINERALS, ROCKS
SOILS AND TIMBER VARIETIES KNOWN TO EXIST IN THE STATE
OF TEXAS ARRANGED ACCORDING TO COUNTIES.**

(Note: This section contains a dense list of county names and descriptions of local minerals, rocks, soils, and timber varieties. Due to the small font and complexity of the text, a full transcription is not possible here. The text is organized by county.)

MAP OF THE STATE OF TEXAS
Showing the Counties and Varieties of Soils in the State.
